VANSHIKA CHANANA

Full-Stack & AI Developer

Gurugram, India | vanshikachanana29@gmail.com | LinkedIn | GitHub | Portfolio

SUMMARY

Full-stack developer with 2+ years building production software at product companies and for freelance clients. I build and ship business systems end to end, from database and APIs to UI and deployment. Recent work: a YouTube revenue platform managing 200+ channels and an HR and payroll system used by 100+ employees. I also build AI features with LangChain, RAG and LLM APIs.

WORK EXPERIENCE

Freelance Full-Stack Developer **Jul 2026 – Present**

Taggify | Remote

Taggify Monetization OS — YouTube Revenue & Rights Platform | *Next.js 15, TypeScript, Tailwind CSS, Python, FastAPI, PostgreSQL, YouTube API, Docker, Render, Cloudflare R2* | Live

- Built the founders' revenue platform for **200+ YouTube channels**, replacing spreadsheet-based monthly reconciliation.
- Daily sync of channel revenue and performance from the YouTube API, plus bulk channel import. Upload a CMS partner's monthly statement and get a channel-by-channel reconciliation.
- Deal management for content owners and brand partners: contract terms, installments and revenue splits, with fee slabs and tax applied automatically before revenue is shared.
- **Month-close locking** so closed periods can't change, and an **audit log** of every login and edit. **Multi-company founder dashboard** with fully separated data per company, showing earned, received and outstanding revenue.
- Money stored as exact decimals with currency (never floating point). Secure login with httpOnly session cookies and lockout after failed attempts. Web and API deployed together as one Docker service on Render.

Taggify HRMS — HR, Attendance & Payroll System | *React, Vite, Node.js, Express.js, MongoDB, JWT, Cloudflare R2, Brevo, Render* | Live

- Built the HR system the company runs on, used by **100+ employees**. It replaced spreadsheets and chat messages for attendance, leave and payroll.
- **Geolocation-verified punch-in/out** with a Work From Home mode. Leave requests and approvals, with monthly earned leave and balances calculated automatically.
- **Monthly payroll calculated from CTC**, with self-service payslips. Salary advances, reimbursements and office expenses tracked in one place.
- **Notification integration:** transactional email via the Brevo HTTP API plus in-app notifications for approvals and updates. Birthday reminders and Employee of the Month certificates.
- Role-based access for HR and employees, employee records and documents stored securely on Cloudflare R2, and all times handled in IST.

Software Developer **Aug 2025 – Present**

TechBridge Consultancy Services | Gurugram

ObservaX — Enterprise ITSM Platform | *Next.js, Redux Toolkit, Node.js, Express.js, Microservices, API Gateway, Micro-frontends*

- Contributed to the architecture of ObservaX, a 9-tool IT service management platform aligned with ITIL v4: **microservices behind an API gateway**, with **JWT authentication and role-based access control**.
- Owned full-stack development of **5 of the 9 tools**, from requirement analysis and API/database design to UI, code reviews and production deployment.
- Architected the **Release Management module**: multi-stage approval workflows, interactive deployment calendars and real-time release dashboards, built as micro-frontends for independent deployment.
- Designed REST APIs with structured validation and error handling, keeping data consistent across tools.

Audio Voice Dialler System — Ericsson | *MongoDB, Express.js, React.js, Node.js*

- Resolved recurring **100% CPU incidents** on a live production system by tracing them to slow database queries and optimizing them (indexing and query restructuring). This cut query time from **~3 s to ~200 ms**.
- Triaged production incidents by severity and shipped hotfixes and enhancements without disrupting live operations.

Remote Management System — Apache Guacamole | *JWT, RBAC, RDP/SSH*

- Refactored legacy session-handling logic to give zero-install, browser-based RDP/SSH access to distributed machines, secured with JWT authentication and RBAC.

Software Developer Intern **Aug 2024 – Jul 2025**

GoKwik | Gurugram

- Built key Shopify app modules for GoKwik's checkout, including the **Side Cart**, **payment flow**, dashboard UI and login flow, using reusable components.
- Built REST APIs and frontend–backend integrations with React.js, Node.js and Express.js, including authentication flows and consistent API contracts.
- Fixed critical production issues, including bundle-size and lazy-loading optimizations that reduced page load time.

PROJECTS

PDF Recognizer — RAG Document Q&A | *Python, LangChain, ChromaDB, Mistral AI, Streamlit* | Live

- Upload a PDF and ask questions in plain English. Text extraction, chunking, embeddings and vector search in ChromaDB, with Mistral AI giving answers grounded in the document.

AI Multi-Agent Research System | *Python, LangChain, Mistral AI, Tavily, Flask, SQLite* | Live

- Four-agent pipeline (search → reader → writer → critic) that searches the web, reads the sources, writes a report and has a separate critic review it. Past reports are saved for replay.

TECHNICAL SKILLS

Languages: JavaScript (ES6+), TypeScript, Python
Frontend: React.js, Next.js, React Native, Redux Toolkit, Tailwind CSS, Micro-frontends
Backend: Node.js, Express.js, FastAPI, REST APIs, Microservices, BullMQ, JWT / RBAC
Databases: PostgreSQL, MongoDB, Redis
AI / LLM: LangChain, RAG, ChromaDB, Gemini API, Mistral AI, Multi-agent workflows, Prompt engineering
DevOps & Cloud: Docker, AWS, Cloudflare (R2), GitHub Actions, Render, Netlify, Git

EDUCATION

B.Tech, Computer Science and Engineering — Chandigarh Group of Colleges, Landran **2021 – 2025**
CGPA: 8.5

VOLUNTEER EXPERIENCE

Technical Core Member (Frontend) — GDSC, CGC Landran **Jun 2022 – Jun 2023**

- Ran React.js and frontend workshops for 100+ students and helped organize tech events attended by 500+ students.
